Summary

DevOps Engineer and SRE with expertise in scaling AWS and GCP infrastructure, Kubernetes, optimizing containerization, CI/CD, and cloud monitoring. Skilled in NewRelic, Prometheus/Grafana, Terraform, and cloud platforms, I drive performance and minimize downtime while aligning technology with business goals. Experienced in adopting an "automate everything" mindset, ensuring cost optimization, and improving infrastructure observability.

Experience:

DevOps Engineer

va2pt.com
February 2024 - Present

Building resilient cloud infrastructure on AWS and GCP with deep experience in Docker, Kubernetes, and CI/CD automation. Focused on reliability and uptime, leveraging tools like NewRelic, SumoLogic, and Prometheus/Grafana for proactive monitoring. Passionate about performance tuning and aligning tech with real business impact.

Breakthroughs:

- Deployed microservices & event-driven applications across AWS & GCP (EC2, ECS, EKS, GKE) using CI/CD pipelines (Jenkins, GitHub Actions, AWS CodePipeline, Bitbucket Pipelines) — enabling faster and more reliable deployments.
- Implemented event-driven architectures (EDA) using decoupled microservices and asynchronous workflows — improving system scalability and throughput.
- Provisioned infrastructure using Terraform (IaC) to create scalable, production-grade environments with automated workflows and improved infra stability.
- Led AWS cloud migration projects with zero critical downtime, resulting in improved system performance, uptime, and reliability.
- Integrated observability tools like Prometheus/Grafana, NewRelic, SumoLogic, and AWS CloudWatch to build complete monitoring & alerting stacks — enabling real-time incident detection and response aligned with SRE practices.
- Developed and enforced Site Reliability Engineering (SRE) practices by defining SLIs, SLOs, and error budgets, while ensuring reliability through automated health checks, log aggregation, and proactive alerts.
- Achieved ~40% reduction in cloud costs via resource right-sizing, autoscaling, spot instances, and decommissioning idle workloads.

IT Support

OptionTown
March 2023 - Dec 2024

Handled IT support for in-house infrastructure with a focus on Linux systems and network administration, ensuring smooth operations and quick issue resolution.

Education & Certifications:

Bachelor's of Computer Application (B.C.A)
June 2023-26 Indira Gandhi National Open University

AWS Certified Cloud Practitioner

Nov - 2024

[Certificate URL](#)

Skills:

- **Cloud Platforms:** AWS, Google Cloud Platform (GCP)
- **Containerization & Orchestration:** Docker, Kubernetes, EKS, GKE, ECS
- **CI/CD Tools:** Jenkins, GitHub Actions, BitBucket Pipeline, AWS CodePipeline
- **Infrastructure as Code (IaC):** Good understanding of the IaC principles and tools like Terraform, CloudFormation
- **Monitoring Tools:** NewRelic, Prometheus/Grafana, AWS CloudWatch, SumoLogic
- **Networking:** Super strong understanding of TCP/IP networks, troubleshooting connectivity issues
- **Programming & Automation:** Write orchestration code, automating pain points using Python, Bash
- **Technical Documentation:** Logging changes, writing procedures, and instructions using wikis
